

## A dashboard for viewing Oracle® databases

The dashboard shows you the availability of your Oracle databases. It is fast and reliable because it does not require server-side agents. The dashboard is free under the GPL license. Main features:

- It works with Oracle database versions 9i to 12c
- It can check dozens of instances in a few seconds
- It requires no additional investment in Oracle licenses or hardware
- There is no need to install anything on the database servers
- The dashboard runs on Windows but the databases can be on any platform
- You can compare properties and settings of all the databases
- You can see the growth history of all your tablespaces (requires a nightly batch job)
- You can adapt the dashboard to your needs by changing the sample SQL queries
- The dashboard uses its own Oracle JDBC driver which works with all supported Oracle versions
- There is a speech option to help the visually impaired (Windows 8 and 10 have the best voices)
- Installation and setup takes less than 30 minutes if you have only a few databases
- The documentation is brief but complete and only about 40 pages
- The entire source is available for free under the GPL license
