

How to download and unpack the DBcafé distribution file

In this document the default root directory **C:\DIS** is assumed but your root directory might be different. This part uses a command window which prompts you for replies. All you have to do is hit Enter to accept the default replies. It only takes a few seconds.

1. Open a new tab in your web browser and copy-paste this URL: <http://www.dbcafe.ch/downloads/>
2. Click on `DIS_distribution.date.time.zip`
3. Click on File – Download
4. Go to the download folder, right-click on the downloaded zip file and Extract All
5. Open unzipped directory `DIS_distribution.date.time`
6. Double-click on `DIS.EXE` to unpack the files
7. If Windows SmartScreen displays a warning then click on “More info” and “Run anyway”
8. A command window opens and asks if you have read and accept the license agreements
9. Hit Enter to continue
10. Hit Enter to accept the default drive C: (you can change it if you want)
11. Hit enter to accept the default root directory DIS (you can change it but no spaces in name)
12. Hit Enter to continue
13. It will finish with the message “SUCCESS: C:\DIS created”
14. Hit Enter to close the window
15. If this is a first time install it will run `C:\DIS\DB\DB_install\run\bin\DBinstall.cmd` as shown in `Installation_Guide.Part1`. If you watch the installation video you might not need the guide.
16. Read the document `C:\DIS\DB\DB_doc\install\Adding_logins_to_CTLFILE6` for advice on how to protect CTLFILE6.

If any doubts or problems please use the **Contact** page on the website to get help. Thank you.
