

## Uninstalling the dashboard (1-5 min)

In this document the default root directory **C:\DIS** is assumed but your root directory might be different. The uninstallation tasks are performed on the Windows machine where you installed the dashboard. If you have only completed Part 1 of the installation then all you need to do is remove these directories:

C:\DIS  
C:\DIS\_archive  
C:\Temp\DIS

If you ran Part 2 of the installation you will have created a schema in one or more databases. You can remove these schemas by running these two jobs and following the instructions below:

C:\DIS\DB\DB\_load\run\bin\create\_monitoring\_objects.servers.TARGETS.cmd  
C:\DIS\DB\DB\_load\run\bin\create\_monitoring\_objects.servers.HOST.cmd

For every prompt to delete the schema reply **y** but just hit Enter [**n**] to every other prompt.

Finally you need to delete CTLFILE6 if you put it in a separate location.

That completes the uninstallation of the dashboard.
